PROFESSIONAL SUMMARY

Dedicated Full Stack Web Developer with over 6 years of experience, skilled in both front-end and back-end development. I enjoy working on project requirements and have a strong interest in organized project management, using Scrum to track progress. My focus is on building user-friendly web applications that meet client needs while ensuring a smooth and efficient development process.

EXPERIENCE

Sisidev: *Senior Full Stack Web Developer*   September 2023–PRESENTE

- Currently engaged as a Senior Full Stack Developer, focusing on backend optimization in Laravel to enhance report generation speed, creating services and repositories for efficient data retrieval, and extensive code organization, cleaning, and refactoring. Also involved in developing new features and maintaining applications, with a special emphasis on refactoring and optimization, using Angular on the front end.
- Independently, dedicated to mentoring junior developers, guiding their learning journey using various AI tools, working on automation projects and implementing the openAI api in a custom application.

SRAX, remote: *Front end Web Developer*   July 2022 – July 2023

- I specialized in implementing and maintaining responsive web designs using CSS and HTML. My focus was on optimizing front-end performance, which included image optimization, asset management, and implementing advanced techniques like lazy loading.
- I was proficient in integrating front-end applications with back-end systems and APIs using JavaScript. This role also involved strong skills in troubleshooting and debugging front-end issues.
- As an active participant in code reviews, I provided constructive feedback and stayed updated with the latest front-end technologies and best practices. I mentored junior front-end developers, ensuring they adhered to best practices. This approach helped enhance both team knowledge and application quality.

Binnacle, remote: *Full Stack Web Developer*   October 2020 – August 2022

- Managed full lifecycle development with Laravel, overseeing database modifications and implementing migrations, routes, controllers, models, and helpers. Responsible for frontend implementation, documentation, and deployment
- Specialized in designing user-friendly web interactions, including dynamic charts, PDF, and XLSX outputs tailored to specific user needs.
- Managed systems for organizational audits, ensuring application responsiveness and meeting both technical and consumer demands and provided application support by troubleshooting and optimizing for operational effectiveness.

Others, remote: *Web developer*   August 2018 – October 2020

- Developed and managed specialized systems for retail clients at Sismo dev, including shipment and sales systems with robust backend solutions.
- At Blue Meky, maintain a multifaceted POS system for multiple branches and contributed to a social networking project for the music and events industry.
- As a Freelance Web Developer, focused on creating single-page, informative websites with an emphasis on user-friendly design and performance.
